What's new in LABELVIEW & CODESOFT 2018?

A complete update of the LABELVIEW and CODESOFT foundation has enabled TEKLYNX to create some exciting user-requested enhancements in version 2018. Even better - this update puts TEKLYNX in a position to roll out significant enhancements in future versions!
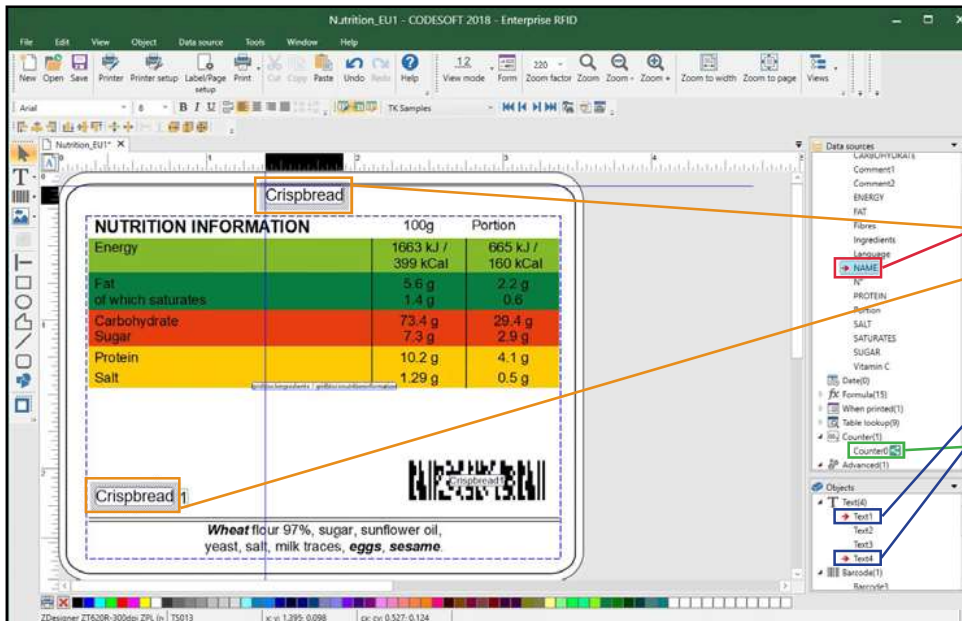

- **Modernized user interface:** LABELVIEW and CODESOFT 2018 both feature a modernized user interface that's easier to understand and use.

- **Enhanced formula creation tool:** Multiple enhancements to the LABELVIEW and CODESOFT formula tool will make creating formulas even quicker and easier.

  1. **Dynamic preview:** See the results of your formula as you type, saving you time.
  2. **Quick reference ASCII chart:** Access an ASCII chart at the click of a button. No more time spent searching the internet to find the character you need!
  3. **Barcode specific functions category:** Quickly access functions specific to encoding symbols and check digits in Code 128, switching encoding mode in Code 128, QR codes, and more.

- **Enhanced variables:** Smart interactions make variables easier to see and use.
  1. **Highlight selected variable on the label:** When you select a variable in the Data Sources panel, the design fields in which it is used will be highlighted. No more guessing to figure out where that variable was used!
  2. **Shared variable icon:** Shared variables are now distinguished with their own icon, so you know this variable is used on multiple labels, and any changes you make will affect those labels.
  3. **Unlimited characters:** Variables now have virtually unlimited character length.

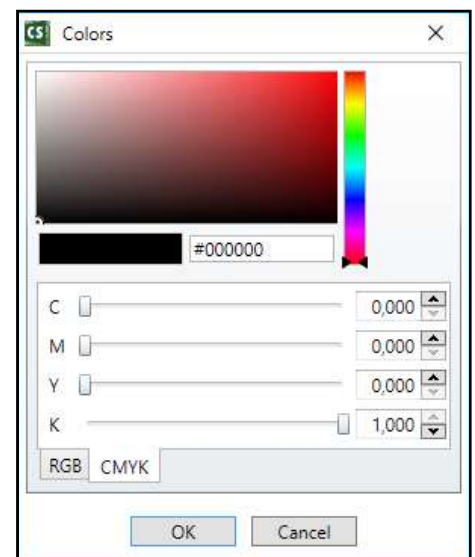

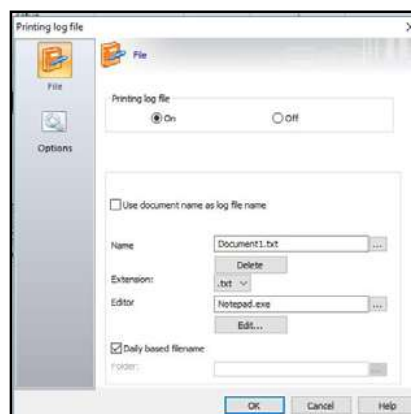

1. **Select a variable in the Data Sources panel and its Objects are highlighted on the label and in the Objects panel**

2. **Shared variable icon**

- **CMYK support:** Colors can now be defined in CMYK format, resulting in more accurate color printing.

- **New log file options:** Log files in version 2018 can be named based on the date and saved in Text or CSV format.
